Abstracts

X-ray irradiators have a range of possible applications. They are widely used in cancer research performed in small animal models to study underlying biological processes and to evaluate the effectiveness of novel treatment strategies. Some possible aspects of cancer research include tumor induction, tumor and microvascular treatment response, anti-cancer drugs development (tumor targeted agents enhancing irradiation efficacy) and mitigators development.

This report elaborates the market size, market characteristics, and market growth of the X-Ray Irradiators industry, and breaks down according to the type, application, and consumption area of X-Ray Irradiators. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for X-Ray Irradiators in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
