Abstracts

In broad terms, virtualization can be considered a method of abstracting an underlying technology layer.¹ This provides productivity benefits via an agreed interface that standardizes underlying complexity. Virtualization, therefore, comes in multiple forms, ranging from network (virtual local-area networks), to storage (volumes), to application (Java Virtual Machines) and beyond. This market focuses on three market categories of virtualized compute offerings for server environments: x86 server virtualization (hypervisor) VM-integrated containers x86 operating system (OS) virtualization (Linux and Windows containers)

This report elaborates the market size, market characteristics, and market growth of the X86 Server Virtualization Infrastructure industry, and breaks down according to the type, application, and consumption area of X86 Server Virtualization Infrastructure. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for X86 Server Virtualization Infrastructure in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
