## Abstracts

Xylitol is a sugar alcohol which has the ability to stimulate the receptors of sweet taste on the tongue. It is considered natural as it can be found in many fruits and vegetables in small amounts. Xylitol is a white, crystalline powder which has similar sweetness as regular sugar but with 40% less calories. It can also be made by using an industrial process where a plant fibre called xylan is transformed into xylitol. When consumed, xylitol reduces the levels of bacteria in saliva which leads to tooth decay and also fights against some of the bacteria causing ear infection.

This report elaborates the market size, market characteristics, and market growth of the Xylitol industry, and breaks down according to the type, application, and consumption area of Xylitol. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Xylitol in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
