Abstracts

Xylooligosaccharides are polymers of the sugar xylose. They are produced from the xylan fraction in plant fiber. Their C5 structure is fundamentally different from other prebiotics, which is based upon C6 sugars. Xylo-oligosaccharide has been commercially available since the 1980s, originally produced by Suntory in Japan. They have more recently become more widely available commercially, as technologies have advanced and production costs have fallen.

This report elaborates the market size, market characteristics, and market growth of the Xylooligosaccharides industry, and breaks down according to the type, application, and consumption area of Xylooligosaccharides. The report also conducted a PESTEL analysis of the industry to study the main influencing factors and entry barriers of the industry.

In Chapter 3.4 of the report, the impact of the COVID-19 outbreak on the industry was fully assessed. Fully risk assessment and industry recommendations were made for Xylooligosaccharides in a special period. This chapter also compares the markets of Pre COVID-19 and Post COVID-19.
