Abstracts

3D scanning is a process that captures the three-dimensional attributes of an object along with information such as color and texture. This technology helps save time, cost, and efforts during a manufacturing process and thus, improves the quality of the output. 3D scanners substantially capture the dimensions of physical objects using laser, light, or x-rays and create point clouds, which are then used to produce a 3D representation of the scanned object using software. Nowadays, 3D scanners have emerged as powerful tools aerospace & defense, automotive, entertainment & media, construction, healthcare, and several other sectors.

The 3D Scanning market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
