Abstracts

Activated Bauxite is a special bauxite with higher aluminum oxide content. The Activated Bauxite is widely used in the treatment of chemicals, oils, electrical transformers, among others, due to its adsorption properties. The product ensures the reduction of contaminants and impurities present in the oils.

Activated alumina is a high-surface-area, highly porous form of aluminum oxide. It can adsorb gases and liquids without changing its form. It works as an Activated Alumina through adsorption. As air enters into the pores of the alumina, the water in the air becomes trapped and the air that continues to pass through an activated alumina filter is dried out.

The Activated Bauxite-Activated Alumina market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
