Abstracts

Wound care is a massive market that accounts for a large proportion of medical expenses in the country. Due to its wide breadth, many people consider it to be an umbrella category that encompasses any therapeutic method or product, from basic cotton gauze to complex collagen-based dressings, that helps one recover from wounds on the body.

Advanced products for the wound healing process are generally prescribed by clinicians after a visit to the doctor or hospital. This category generally includes film and foam dressings, hydrogels, alginates and hydrocolloids. Such products are largely focused on keeping the wound hydrated to encourage healing, following the philosophy that a moist microenvironment promotes the natural healing process (human cells require water to live and grow) without occluding the wound.
