When high-definition televisions reached the marketplace, they were considered a luxury. But as costs came down and consumer adoption rose, they became the norm. Now, if you stream a standard-definition video online, you're likely to rub your eyes and wonder if it's just a blurry image. Viewers want clearer pictures. And for the insurance industry, high-resolution aerial images from airplanes and drones are opening a new range of possibilities not attainable with lower-res satellite imagery and ground surveys.

For properties of higher value, a surveyor or loss control professional might be sent to the property to conduct a survey. For properties of lower value, some insurers have more recently begun to rely on public records data, trusting that municipal tax assessors have accurately captured basic attributes of the structure.

The Aerial Imaging in Insurance Service market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
