## **Abstracts**

Agile software development, also known as agile development, is a new approach to software development that has attracted widespread attention since the 1990s. It is a software development feature that meets the needs of fast-changing needs. Their specific names, concepts, processes and terminology are different. Compared with 'non-agile', they emphasize the close cooperation between programmers and business experts, face-to-face communication (think more effective than written documents), and often provide new software versions, compact and self-organizing teams, code writing and Team organization methods that adapt well to changing needs and focus on people's role in the software development process
