An Agriculture seeder, or air drill, is a machine designed for the agricultural industry and used to place seeds into the ground. Common features found on the seeder include openers, a seed tank, and packers. Seeders are used to plant seeds for beans, cotton, rice, wheat, canola and many types of vegetables.

The terms seeders and air drills are sometimes used interchangeably, dependant on the manufacturer. They accomplish essentially the same tasks, although some manufacturers consider air drills to be a better use of terminology. Air drills can be different as they contain various tanks for fertilization processes as well as dispensing seeds. However, seeders can sometimes function for this purpose as well, though they may need attachments to do so.
