Small practices don't have the resources to house and locally install an EHR system. Hence the popularity of web-based solutions which dramatically reduce the IT burden for practices. A web-based solution works well in the ambulatory environment. The records are portable, accessible from anywhere (all one needs is an Internet-connected computer). Information moves between staff members more as messages, rather than orders – the “order sheet” that is a standard part of an inpatient chart does not exist in an ambulatory record.
