Abstracts

Animal model is a living, non-human animal used during the research and investigation of human disease, for the purpose of better understanding the disease without the added risk of harming an actual human being during the process. Animal models serving in research may have an existing, inbred or induced disease or injury that is similar to a human condition. The animal chosen usually meets a determined taxonomic equivalency to humans, so as to react to disease or its treatment in a way that resembles human physiology as needed. The use of animal models allows researchers to investigate disease states in ways which would be inaccessible in a human patient, performing procedures on the non-human animal that imply a level of harm that would not be considered ethical to inflict on a human.

The Animal Model Services market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
