Abstracts

Application lifecycle management (ALM) is the product lifecycle management (governance, development, and maintenance) of computer programs. It encompasses requirements management, software architecture, computer programming, software testing, software maintenance, change management, continuous integration, project management, and release management

Application Lifecycle Management (Alm) Software is a software tool that uses computer-aided software engineering. An organization usually produces software for multiple customers, and the requirements of customers are diverse. A software life cycle often does not fit all situations, so organizations can specify more and can be modified to suit the organization. When developing a project definition software process, the process management method helps to reduce the artificial development caused by the software development process, especially for the development of large-scale applications.

The Application Lifecycle Management (ALM) Software market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
