## **Abstracts**

Aquaponics is the system of farming plants and fish together in a mutually beneficial series and is intended to be a highly sustainable production system that incorporates principles of water conservation, sustainable vegetable production and perhaps organic plant and animal agriculture. It is the sustainable form of agriculture which integrates conventional aquaculture and hydroponics leading to the growth of fishes and plants together in a symbiotic environment. Waste produced by fish contains lots of beneficial nitrates and ammonia which is not good for fishes if they remaining water in great quantity. These nitrates and ammonia-containing wastes are good fertilizers for plants which can consume all these nutrients to purify the water.

The Aquaponics market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
