Abstracts

The arbitrary waveform generator is an electronic test device for generating waveforms. These waveforms are then injected into an electronic device that remains for testing. Depending on how the waveform passes through the device, you can determine if the electronic device is operating as expected. In addition, the type of defect can be determined to some extent depending on the output obtained when the waveform passes through the device.

The Arbitrary Waveform Generator market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
