Abstracts

Bellows are considered to be essential part of an automobile, particularly employed in the steering and suspension system. The job of the bellows is to resist the compression by the force and provide an excellent cushioning effect. There are several types of bellows. Among them, folding bellows are preferred for automotive and buses, whereas, corrugated type bellows are preferred in monorails and light rail vehicles. Automotive bellows finds its vital application in protecting, covering, and enhancing the service life of various machine parts, such as lead screws, spindles, shafts, guide ways, pistons, cylinders, and more from dust and other foreign particles. The increasing traction towards air springs, owing to the impressive benefits over coil springs is leading to the increasing demand for air springs. Bellows are the key parts of an air spring. Hence, the increasing demand for air springs will significantly contribute to the automotive bellows market.

The Automotive Bellows market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
