A software-defined radio is a wireless communication device in which the transmitter and receiver functions are changed or changed using software without any changes to the hardware. These radios eliminate the need to use capacitors and resistors because software-based algorithms are used to select specific necessary frequencies. An autonomous software-defined radio receiver is an software-defined radio receiver that can be configured autonomously for any type of signal arriving at the antenna. The Autonomous Software-Defined Radio Receiver market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
