An AUG is a type of AUV that uses minute changes in its buoyancy to move upward and downward in the ocean akin to a profiling float. However, unlike a float, the AUG uses its wings to convert vertical motion into horizontal motion, thus driving itself forward with very low power consumption. It is not fast when compared to a conventional AUV. However, AUGs that employ buoyancy-based propulsion characterize a substantial increase in duration and range, and can extend ocean surveying missions to thousands of kilometers of range, and from hours to weeks or months.

The Autonomous Underwater Glider market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
