Abstracts

A biological microscope is usually an optical microscope used to observe cells, tissues and other biological samples. Multiple objective lenses can be connected, which allows the magnification of these microscopes to be 10 to 1000 times or higher. Since these systems are primarily used to view very flat samples (eg microscope slides, culture dishes, well plates, etc.), the objective lens has a shorter working distance and a higher numerical aperture. Some specialized versions of these microscopes are capable of fluorescence imaging and, more specifically, fluorescence microscopy.

The Biological Microscope market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
