Biosimilar therapy is defined as a therapy that is highly similar to approved biopharmaceuticals. They are made by converting biopharmaceuticals made from living cells in the laboratory into large-scale production molecules. This is quite different from the general treatment method, which is identical to the reference small molecule drug. The reason behind this is that it is impossible to make a copy of the same biologic drug. The Biosimilar Drug market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
