Although body area network technology is a new technology it has great potential to grow in healthcare, sports and other end-use industries. Body area network devices are either wearable devices or implant devices. The key component of wearable devices used in body area network are microcontrollers and sensors. Microcontrollers which consists of an integrated circuit (IC) known as microprocessor whose function is similar to the function of central processing unit in a computer. The sensors measure various health parameters of human body. Microcontrollers and sensors are present in both wearable and implant devices. Sensors present in implant devices are located inside human body. Sensors must not provide and harmful side-effects to humans. Implant sensors have a lifetime of less than a decade.
