Abstracts

CAD (computer-aided design) software for healthcare is used to design 3D models of the implants, prosthesis, or anatomical models to practice before a surgery. 3D printing is greatly impacting the medical industry, indirectly impacting the CAD software market for healthcare. Before printing a 3D model, it is needed to be created or designed using the CAD software. Medical technology is now building organoids (mini organs) using 3D printing using the stem cells as material. These organoids, once built, will in the future be able to grow inside the body of a sick patient and take over when an organic organ, such as a kidney or liver, fails. 3D printers have successfully recreated body parts as complex as blood vessels, which proves that this technology has a lot of untapped potential.
