Abstracts

Anthracite, also known as hard coal, is a naturally occurring material. It is rich in carbon content and represents the highest level of non-metamorphic coalification. Anthracite coal forms as a result of compression of geologically preserved organic residue of primordial swamps, under the Earth's crust. Anthracite coal finds numerous applications in foundries as a carbon raiser, refractory coating component, filler in rubber production, and pigments. Calcination process involves heating anthracite coal to high temperatures, in the presence of air or oxygen.

The Calcined Anthracite market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
