Abstracts

Cardiopulmonary Autotransfusion System is a sophisticated device with an exceptionally effective design that provides autologous blood during surgical procedures. Autotransfusion is a process wherein a person receives their own blood for a transfusion, instead of banked allogenic (separate-donor) blood. There are two main kinds of Autotransfusion: Blood can be autologous 'pre-donated' (termed so despite 'donation' not typically referring to giving to one's self) before a surgery, or alternatively, it can be collected during and after the surgery using an intraoperative blood salvage device. The latter form of Autotransfusion is utilized in surgeries where there is expected a large volume blood loss.

The Cardiopulmonary Autotransfusion System market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
