Abstracts

Cellulose acetate butyrate (CAB) is an amorphous, transparent thermoplastic material with uses from trim for automobiles to tool handles, pens and blister packaging among others. It can be melted and remodeled into new shapes without altering its molecular structure. It is resistant to ultraviolet rays, has low moisture absorption and high impact strength. In addition it has high transparency, aesthetic appeal, high dielectric constant, excellent machinability, compatibility with human skin and ability to be offered in unlimited range of colors. It has soft and pliable nature and can be stretched up to 60% of its original length. It is expensive than its precursor cellulose acetate because of additional steps necessary in producing the compound. Since, cellulose acetate butyrate is resistant to ultraviolet, it can be used for applications where high surface gloss is needed such as production of lacquers for lenses and for various forms of plastic film.

The Cellulose Acetate Butyrate (CAB) market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
