Abstracts

Chromatography is a physical method for separation of compounds. It is required, as a sample distributes or partitions itself to different extents in two different, immiscible phases. The two immiscible phases could be a solid and a liquid, or a gas and a liquid, or a liquid and another liquid. One of the two phases is a stationary phase (a solid, or a liquid supported on a solid) and does not move, and the other is a mobile phase and moves with respect to the first.
