Abstracts

A cloud-based VDI solution is a computing model where an end-user's system can access all the essential files and data virtually in spite of being separated from the physical IT infrastructure. The computing model uses a cloud-based storage space wherein the system data and applications gets stored in the data centre of a primary cloud service provider where the end-users can access the data through login credentials. The VDI layer acts as an intermediary between backend and end-user application. It controls the transfer of data and execution of applications.

The Cloud-Based VDI market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
