For the past 50 years, satellite imagery was traditionally only available to the U.S. intelligence community, and to countries with enough resources to launch their own satellites. However, the rise of commercial aerospace has led to the entrance of new players. Space is becoming more accessible, not just for wealthy spacecraft developers. Launch costs have decreased, and technical components are becoming miniaturized. Commercial high-res imaging has applications beyond consumer habits. Its resolution – 1 ft in detail – is high enough to identify manhole covers and fire hydrants. It can also be used to track human activity: terrorism, elephant poachers, oil theft, civil wars. Commercial satellite companies offer important data that can be used in defense and national security. Commercial aerospace's key advantage is decreased costs, as space becomes more accessible, while government terrorist surveillance through satellite imaging comes at a high expense.

The Commercial Satellite Imaging market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
