Abstracts

Compression Leggings are a kind of cloth garment, most often sheathing the body from the waist to the toe tips with a tight fit, hence the name. They come in absolute opaque, opaque, sheer and fishnet styles or a combination of them, such as the original concept of the American term pantyhose with sheer legs and opaque panty. Wearing of tights has a history going back several centuries, when they were worn by men. Today, they are worn primarily by women and girls. In recent years, they have been sometimes offered as men's fashion. Athletic tights are considered unisex. Originally, leggings covered only the legs, not the lower torso; were two separate pieces; and did not contain elastic fibres, so were cut close fitting (to use less fabric) and were loose, not tight. When made of fine silk this hosiery was considered to be a stocking. When nylon fibers were developed and introduced in the 1940s, these stockings were referred to as nylons. When the separate legs were woven together with a panty that covered the lower torso up to the waist in a single, integrated format, the term pantyhose was coined, since it was a one piece construction of a panty with a pair of separate hose, one for each leg. This joining together eliminated any need for garters for holding up each separate leg covering.

The Compression Leggings market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
