Abstracts

Insulation is a material designed to prevent heat or sound from being transmitted from one area to another. It is usually used to keep heat and sound in or out of a house, or to confine it to certain parts of the house. Insulation commonly incorporates materials that consist of millions of tiny pockets of air, which is a good insulator. Insulation materials are defined as those materials or combinations of materials that retard the flow of heat energy by performing one or more of the following functions: conserving energy by reducing heat loss or gain; controlling surface temperatures for personnel protection and comfort; preventing vapor flow and water condensation on cold surfaces; increasing operating efficiency of heating/ventilating/cooling, plumbing, steam process, and power systems in commercial and industrial installations; and reducing emissions of pollutants in the atmosphere.

The Construction Insulation Materials market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
