Abstracts

The crankshaft associated with the crank is a mechanical component that is capable of switching between reciprocating motion and rotational motion. In a reciprocating engine, it converts the reciprocating motion of the piston into a rotary motion; in a reciprocating compressor, it converts the rotational motion into a reciprocating motion. To switch between the two movements, the crankshaft has a 'crank rotation' or 'crank pin' with the axis of the additional bearing surface offset from the bearing surface of the crank and the 'big end' of the connecting rod from each cylinder connected to the surface.

The Crankshafts market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
