Abstracts

Digital Breast Tomosynthesis (DBT) Equipments is a machine which can support the Digital tomosynthesis service, Digital tomosynthesis is similar to a CT scan. During a CT exam, images are obtained from a full 360° rotation of a detector/X-ray source around a patient. In digital tomosynthesis, the rotation of the detector/source is limited (e.g. 20°) as are the number of images that can be acquired. The 3-D reconstruction of this limited scan leads to very good in-plane resolution (e.g. 100 µm reconstructed pixel), but coarser Z-axis resolution (e.g. 1 mm thick slices). Still, this Z-axis resolution provides enough separation of normal overlapping tissue to detect cancer that may otherwise go undetected.

The Digital Breast Tomosynthesis market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
