Digital calipers are the latest in caliper technology and are considered as an evolution of Vernier calipers. Digital calipers are generally used to measure objects which cannot be measured with a ruler. They are made of stainless steel and contain plastic case for display. Digital calipers are measuring instruments which take differential measurements, and are commonly used for inspection in the manufacturing industry to provide precise measurements of an object. Measurement on digital calipers can be taken in both metric and imperial units, and readings can be switched between millimeters, centimeters, and inches. The reading and measurement is generated electronically and displayed on a digital and high resolution screen as a single value. Calipers are used in various fields, such as, mechanical engineering, inspection, engineering design, metalworking, science, and manufacturing, among others. The Digital Caliper market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
