Abstracts

A digital duplicator, also known as a printer-duplicator, is a printing technology designed for high-volume print jobs (20 copies or more). Unlike copiers and laser printers, the Digital Duplicator applies the same method as the stencil duplicators which create images on the paper with ink, by making ink penetrate through the pore created onto the master. However, the Digital Duplicator masters are no longer a cloth-like material covered with wax which is used in the stencil duplicators. With the advance of material technologies, special masters which provide finer penetration of ink have been developed. The ink has also been specially developed for the Digital Duplicator in order to realize high image quality.

The Digital Stencil Duplicator market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
