Abstracts

The discontinuous screen changers utilize a lever, ratchet, or screw device to move the melt filters in and out of the flow. These screen changers are called discontinuous because they require the line to be stopped for a screen change. The positive characteristics are low cost and straight-through, low-pressure-loss flow design; while the obvious disadvantage is complete process interruption when screens need to be changed.

The Discontinuous Screen Changers market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
