Abstracts

Distributed wind is defined by the wind project's location relative to end-use and power distribution infrastructure, rather than turbine or project size. Distributed wind includes

the following:

wind energy systems, either off-grid¹ or grid-connected, at homes, farms and ranches, businesses, public and industrial facilities, or other sites to offset all or a portion of the local

energy consumption at or near those locations.

systems connected directly to the local grid² to support grid operations and local loads.

The Distributed Wind market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
