## Abstracts

Swabbing a cheek for human DNA or RNA is one of the most fundamental collection methods in the field of genetics. Sterile swabs come in many different shapes and sizes. There are three of the most widely-used types in the field today. Cotton is a material that has been widely used in the field of DNA sampling, be it forensics or human genetics. While cotton swabs are commonly used for buccal cell collections, foam swabs are most ideal for saliva collection. Flocked swabs have been adopted into the field of genetics due to the superior nature of their polyester single fibers. Providing a unique alternative to the cotton or foam, these flocked fibers are able to collect, retain, and elute the sample, even when cell counts are limited.

The DNA Sampling Swab market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
