Abstracts

An e-cigarette is a battery powered electronic device which heats a solution (typically, but not always, containing nicotine) to create a vapour. An electronic heating element is activated which vaporises the liquid formulation (often referred to as the 'e-liquid') and the vapour condenses to form an aerosol. No combustion takes place; instead the user inhales the liquid's vapour rather than smoke. E-cigarettes do not contain tobacco, however, where nicotine is used, it is derived from tobacco.
