Abstracts

Empty capsules are made from gelatin, which is derived from animal protein (pork skin, animal bones & skin and fish bones) and plant polysaccharides or their derivatives (HPMC, starch, pullulan and others). These empty capsules are made in two halves: a lower-diameter "body" that is filled with various drug dosage forms and then sealed using a higher-diameter "cap". Empty capsules are conventionally used as a dosage form for both prescription and OTC drugs, herbal products and nutrient supplements (either in powder or pellets form). In addition, empty capsules are also used for filling liquids and semi-solid dosage forms, especially for drugs that have low bioavailability, poor water solubility, critical stability, low dose/high potency and low melting points. Empty capsules offer some advantages over soft-gelatin capsules such as constant capsule dimensions and low sensitive to oxygen permeability.

The Empty Capsules market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
