Abstracts

Ethylene Oxide (EtO) sterilization is mainly used to sterilize medical and pharmaceutical products that cannot support conventional high temperature steam sterilization - such as devices that incorporate electronic components, plastic packaging or plastic containers. EtO gas infiltrates packages as well as products themselves to kill micro organisms that are left during production or packaging processes. This gas, mixed with air at a ratio of at least 3% EtO gas, forms an explosive mixture. Pure EtO gas boiling point is 10.73 °C at atmospheric pressure. Most of the time, it is mixed with Nitrogen or CO₂. This explosive condition requires Intrinsic Safe material (ATEX) zoning, for security of people as well as security of the process itself.

The Ethylene Oxide Sterilizers market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
