Abstracts

Explosion proof equipment does not mean that products will be able to withstand any explosion. Instead, it means that products will contain any source of an explosion within its housings. The term 'explosion proof' also does not indicate, that the product is capable of withstanding an internal explosion without allowing flames or hot gases to escape or trigger an explosion in the surrounding atmosphere. A broader term that can be assigned to these products is explosion protection equipment. This equipment contains in itself various protection principles, like explosion prevention by limiting the operating energy, explosion proof by making the housing robust to withhold any explosion inside itself, and explosion segregation by isolating the source of an explosion inside a protective medium.

The Explosion-Proof Equipment market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
