Abstracts

Phytogenics are a group of natural growth promoters (NGPs) or non-antibiotic growth promoters used as feed additives, derived from herbs, spices or other plants. They are commonly regarded as favorable alternatives to antibiotic growth promoters (AGPs) in livestock production. Essential oils represent a concentrated form of phytogenics, containing mainly the active ingredients of the plants. Phytogenic feed additives, known as PFAs or botanicals, are substances of plant origin added to animal diets at recommended levels with the aim of improving animal performance.
