Feldspar is a group of rock minerals that constitute aluminum silicate as the main mineral. Other than aluminum silicate, the other constituents of feldspar include potassium, soda, or lime. Feldspars are crucial components for building stones. In fact, most products that we use in our daily lives are made of feldspar. The alumina and alkali content of feldspar makes it a useful element in various industrial processes. This aluminum content provides durability, hardness, and corrosion resistance to any finished product made from feldspar.

The Feldspar market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
