## **Abstracts**

Polyferric Sulphate and Ferric Sulphate are iron based coagulants. Coagulants are the chemicals used for the primary treatment of sludge. They destabilise the particles by neutralising the charge on the particle with charges opposite to those of the suspended solids. Once the charges are destabilised, the particles are capable of sticking together. Ferric and polyferric sulphate is mainly used by different industries to treat waste water. These chemicals are used to assist with the removal of colour and turbidity present in untreated, raw water. They do this by forming particles in the form of flocs, which are then removed during downstream clarification or filtration treatment processes. The Ferric Sulphate and Polyferric Sulphate market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
