Abstracts

Fish processing is a practice of combining fish and its products between the time the fish are caught and continuing until the final product made from it is delivered to the customer. The final delivered product is also ready to eat. Fish processing covers all aquatic organisms, regardless of where they are captured (wild fisheries or fish farming). One of the main concerns of the process is to prevent fish from getting worse. Fish processing is necessary because fish are perishable and therefore need to be preserved and properly treated to give the final product a nutritional quality and a longer shelf life.
