Abstracts

Float Glass is manufactured by floating molten glass on a bed of molten metals, such as tin, lead and various low melting point alloys. Float glass is a sheet of glass and with the molten glass method, the resultant sheet possesses a good flat surface and uniform thickness. Most soda-lime glasses are float glass and some quantities of flat panel display glass and specialty borosilicate are also made by the float glass process. Common raw materials used for the manufacturing of float glass are soda ash (sodium carbonate), sand, limestone, salt cake (sodium sulfate) and dolomite. Other ingredients may be used as refining, coloring agents or for required changes in the chemical and physical properties of the glass.
