Abstracts

Floating solar or FPV (floating photovoltaic) refers to a series of solar panels on a structure that floats on a body of water, usually an artificial basin or lake. The main advantage of floating PV plants is that they do not occupy any land, except for the limited surface required for the connection of the electrical cabinet to the grid. Their prices are comparable to those of onshore plants, but they provide a good way to avoid land consumption.

The Floating PV Plant market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
