Friction welding is a solid-state welding process. The mechanical friction between the workpieces in relative motion to one another generates heat along with an additional lateral force called upset. This force is generally applied to plastically displace and fuse the materials. Friction welding is a forge welding technique, wherein no melting occurs unlike traditional processes like fusion welding.

The Friction Welding Machine market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
