Fuel cell system designs range from very simple to very complex depending upon the fuel cell application and the system efficiency desired. A fuel cell system can be very efficient with just the fuel cell stack and a few other balance-of-plant components or may require many outside components to optimize the fuel cell performance. The fuel cell catalyst, membranes, and flow-field plates are very important areas for fuel cell improvement, but stack optimization is as equally important. This post focuses on selecting and designing the fuel and electrical subsystems.

The Fuel Cell System market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
