Abstracts

Switchgear is a protection device and is a combination of different types of components such as circuit breakers, current transformers, potential transformers, lightning arrestors, protection relays, and disconnectors arranged in a logical manner. They are used in transmission and distribution of electric power and effectively protect equipment and circuits from unregulated power spikes. On the basis of material used for arc quenching, switchgears can be classified as gas-insulated switchgears, air-insulated switchgears, oil-insulated switchgears, and vacuum-insulated switchgears. Gas Insulated Switchgear (GIS) is a compact metal encapsulated switchgear consisting of high-voltage components such as circuit-breakers and disconnectors, which can be safely operated in confined spaces. GIS is used where space is limited, for example, extensions, in city buildings, on roofs, on offshore platforms, industrial plants and hydro power plants.

The Gas Insulated Switchgear (GIS) market revenue was xx.xx Million USD in 2019, and will reach xx.xx Million USD in 2025, with a CAGR of x.x% during 2020-2025.
